

# LECTURES ON ANDERSON LOCALISATION

## Lecture 1.

*Introduction* . . . . .

Qualitative discussion: Quantum Mechanics of a single particle in a random potential; Spectrum, Density of states, wave functions, Rate of Tunneling, Diffusion and Localisation, Hoping Conductivity. Level Statistics. Integer Quantum Hall Effect.

Elements of Theoretical Technology (very qualitatively): To average or not to average. Green's Functions, Conductivity.

## Lecture 2.

*Band Tail* . . . . .

Density of states at the energy  $E \rightarrow -\infty$ .

## Lecture 3.

*Supersymmetric Non-linear  $\sigma$ -Model.*

*Level Statistics* . . . . .

## Lecture 4.

*Weak Localisation* . . . . .

Quantum Correction to Conductivity in the Extended states.  
Effect of Magnetic Field, Magnetic Imurities and Spin-Orbit Interaction.

## Lecture 5.

*Scaling Theory for Localisation* . . . . .

“Gang of Four” (E. Abrahams, P.W. Anderson, D.C. Licardello and T.V. Ramakrishnan) Theory

<b>Lecture 6.</b>	
<i>Pre-Localisation</i>	.....
<b>Lecture 7.</b>	
<i>Integer Quantum Hall Effect</i>	.....
<b>Lecture 8.</b>	
<i>Rate of Phase Breaking</i>	
<i>due to Electron-Electron Collisions</i>	.....
